High-current terminal block, 285 Series, gray

Our through terminal block (item number 285-195) simplifies electrical installations. Ensure that the strip lengths are 35 mm when connecting conductors to this through terminal block. This product features conductor terminals and utilizes POWER CAGE CLAMP. The POWER CAGE CLAMP is perfect for connecting large conductor cross-sections. This universal connector is both reliable and maintenance-free. What's more, you can use it to connect all types of conductors and the clamping point can be locked open, making it easier to use. You do not need to use a torque wrench or prepare the conductor. For example, crimping ferrules is not necessary. Depending on the conductor type, this through terminal block is designed for conductor cross sections ranging from 25 mm² to 95 mm².

Installation Notes

Installation

Snapping a terminal block onto DIN-rail (to the left or to the right).

Removing a terminal block from the assembly (to the left or to the right).

Conductor termination

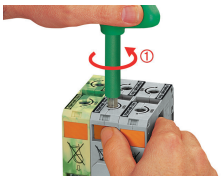

For the optimal clamping force:

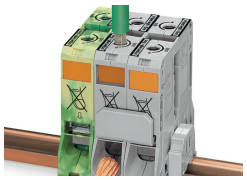

- Bend conductor
- Cut conductor to length (conductor end must be straight)
- Strip conductor

Always observe the on-unit printed strip length guide!

Conductor termination – step 1:
Rotate the T-wrench counter-clockwise to the stop . Next, push in the orange locking tab. The clamp is locked open for hands-free wiring.

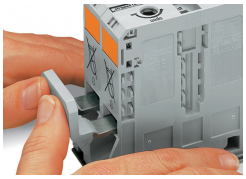

Conductor termination – step 2:
Insert a stripped conductor into the clamping unit until it hits the backstop. Hold in this position.

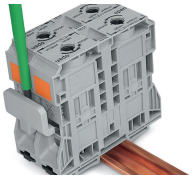

Conductor termination – step 3:
A short counter-clockwise rotation releases the tab. When unlocked, the T-wrench rotates clockwise, securely clamping the conductor.

Commoning

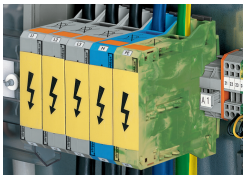

Commoning with an adjacent jumper: insert the jumper above the conductor entry hole – prior to conductor termination. The nominal cross-section remains unchanged.

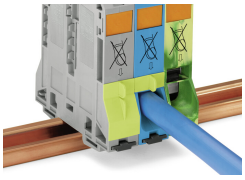

Removing jumper via operating tool.

Cover

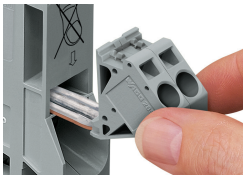

Protective warning marker may indicate:
Notice: Power is still on even after switching off the main switch!

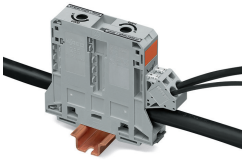

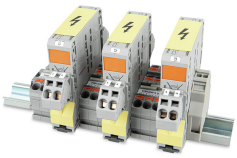

Yellow, detachable finger guards provide touch-proof safety by shielding jumper contact slots and/or unused conductor entries.

Power tap

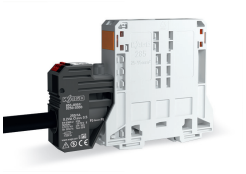

Easily and consistently tap directly into the power supply. Insert the unwired tap before opening the clamping unit.

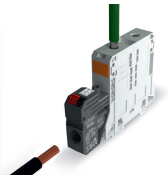

The power taps enable the distribution of the L1, L2 and L3 potentials. The warning covers and finger guards ensure IP20 touch-proof protection.

Current and voltage tap

Installation via jumper slot

Feedthrough for primary conductors

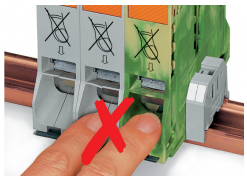

Push-in CAGE CLAMP® connection technology

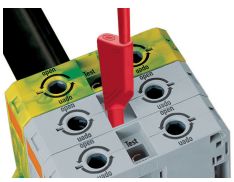

Integrated fuse

Security

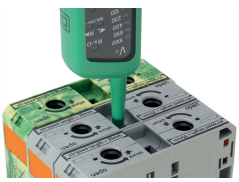

Risk of Injury!
Do not insert fingers in the conductor entry!

Testing

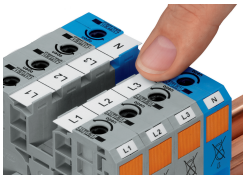

Testing via touch-proof 4 mm Ø test plugs (not available from WAGO, but offered by industry suppliers such as, Multi-Contact Deutschland GmbH).

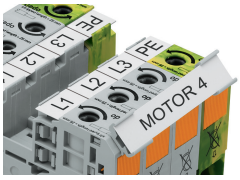

Testing
Voltage measurements can be performed, e. g., using a 2-pole voltage tester (Item No. 206-707).

Marking

WMB markers or self-adhesive, printable marking strips can be accommodated on 35, 50 and 95 mm² high-current terminal blocks.

Marker carrier (Item No. 285-442) for marking strips (Item No. 2009-110) or 2 WMB markers for 285-13x, 285-15x and 285-19x Terminal Blocks
